

Regulatory monitoring to ensure compliance of your chemical products

Keeping up with changes in regulations affecting your chemical products is effortless and efficient with EcoWatch™ from EcoMundo.

The EcoMundo regulatory monitoring method

Frequent reference sources consultation.

A selection of information.

A personalized bimonthly newsletter.

Anticipating future regulatory changes.

Two levels of monitoring

Changes in current regulations

Benefit from the oversight of regulations and their updates, monitoring implementing regulations and any amendments, as well as tracking directives, their amendments, and the corresponding French transposition orders, ensuring peace of mind.

- REACH regulation
- CLP regulation
- Directive concerning the protection of workers
- Biocide regulation
- Directive on aerosols dispensers
- Detergents regulation
- Cosmetic product regulation
- Toys safety regulation
- Food contact regulation
- Transport of dangerous good by road
- POP regulation
- PIC regulation
- ROHS, WEEE & End-of-Life Vehicles directives
- Nanomaterials
- Explosive precursors
- Endocrine disruptors (ED)
- Microplastics
- AGE Act
- Drug precursors
- Ozone layer & greenhouse gases
- Environmentally classified facilities

Monitoring processes leading up to regulations

Identifying project modifications through public documents, monitoring of ECHA activities (registers of intentions, ARN list, etc.) and monitoring of specialized sites.

- REACH
- CLP
- Biocides
- Aerosols
- Toys
- ED
- POP
- PIC
- Cosmetics
- Nanomaterials
- Detergents
- Microplastics

Global management of your regulatory watch with EcoWatch™

Optimize your regulatory watch with an integrated strategy to anticipate your compliance in the short, medium and long term.

Monitoring

The essential offer

A bimonthly newsletter based on your scope to help you understand your obligations.

Screening

Impact offer

An assessment of the regulatory status of your substances portfolio to study the impact on your mixtures.

Option

Substances inventory

An extraction of the composition from your SDSs.

Prioritization study

Strategic offer

Expert analysis and impact assessment to anticipate the regulatory trajectory of your targeted substances.

Options

Hazard studies

A bibliography or read across to determine the classification of your mixtures.

Supply chain mapping

A study of the uses of your substances within the supply chain.
